

FRONT PORCH FORUM: I Like the Parkway

Thank you for taking the time to share your experience with the Champlain Parkway.

We appreciate hearing from community members who have observed benefits from the project, including improved access to Interstate 189, reduced congestion at intersections such as Pine Street and Home Avenue and Home Avenue and Shelburne Street, and improved traffic flow throughout the area. It is also encouraging to hear that the new shared-use path and walking connections are being enjoyed.

The Champlain Parkway was designed to improve connectivity, enhance safety for all users, and help reduce traffic impacts on neighborhood streets. As the corridor continues to be traveled over time, the Department of Public Works and the project team will continue to monitor traffic conditions, collect data, and review community feedback.

Thank you again for sharing your observations and for being part of the community conversation surrounding the project.

Best,

The Champlain Parkway Project Team

FRONT PORCH FORUM COMMENTS:

I am very pleased with how the Champlain Parkway has turned out. It is attractive and the lower part creates a pleasant walking option. I have noticed the traffic congestion that was so common at the corner of Pine Street and Home Ave., and Home Ave. and Shelburne Road has greatly decreased. Also, crossing the one-way bridge on Queen City Ave. is also much easier. Getting on and off 189 is so easy now. While it was unfortunate that lawsuits delayed this project for many, many years, the delays may have led to a good working design.
